Introduction

This journal almanack has astronomical information included for each day which is rarely found. Whilst diaries which feature astrological data do exist, they are based on a geocentric view. The data presented here is *heliocentric*, with planets (including the Earth) residing in signs as seen from the Sun. As each planet sweeps around in its orbit, it will be located day-by-day against the zodiacal background of distant stars. Traditionally, this stellar background is divided into the twelve signs (sectors), Aries through Pisces.

Strangely, a heliocentric system has been consistently ignored by astrologers even after it was verified by Copernicus and lauded by Kepler centuries ago. Before them, the cosmos was considered to be centred around the Earth. And observers attributed character and influence to the zodiac signs, and to the planets themselves. If there was any validity in the astrological philosophies (already well established 4,000 years ago), then the directional signs and the planetary bodies are primary concerns. What is more, these elements do not change if we see them from the point of view of the Sun.

Why regard the Sun as the centre of this system? Because it actually is. And if any entity in our immediate cosmos has the significance and power to somehow respond to, control and communicate actual physical effects across the solar system, it would be the Sun. This and many related ideas are discussed fully in the author's book *Sky Knowledge.* Suffice to note that, if there is meaning to be found in the astrological positioning of planets, then a heliocentric view puts everything into a natural order for us to examine.

For many of us, finding the Moon in the night sky is a challenge, let alone the planets (which are often confused with stars). It is hoped that the astronomical data as it is presented here will inform and inspire, and help us correlate our daily lives to the state of the solar system in which we live, as it really is.

*

Disclaimer

The author accepts no responsibility for any misfortune resulting from serious decisions based on either the ideas presented in *Sky Knowledge* or the data given here. Where common sense does not rule, let there be at least profound understanding.

About The Data

For each day, there are four items of information (besides the day name and date. In the table, the locations of the seven astrological planets are given. The top row has the planet symbols, the bottom row the symbols for the signs in which they reside, as at 12:00 GMT. The slow, unseen, distant planets Uranus and Neptune are excluded. Our Moon is grouped with the planets, but her sign is necessarily geocentric. Note that the signs given here are a few degrees different from traditional Western astrology* (even after coordinate transformation), being aligned to important points of the Sun's own orientation.

Immediately below the table is the time when the Galactic Center lies at its highest in our sky. This point is the center of our Sun's own orbit, and indirectly of immense importance to the solar system.

After that are listed pairs of planets with significant angles between them, whether inline (conjunction), on opposite sides of the Sun (opposition), or at right angles (square). The Moon's *resonance* measures her geocentric angle against a planet's heliocentric angle. Tolerance is 15 degrees.

If the Moon is at a significant angle with the Sun in our sky, it is noted with a symbol next to the day name. There is either a white circle for Full Moon, LQ for Last Quarter, a dark circle for New Moon, or FQ for First Quarter.
